The SSG is a soil settlement gauge used to measure settlement or heave at a precise location in soils.

**Description**

The SSG consists of a vibrating wire or fiber optic pressure transducer housed in a corrosion-resistant stainless steel body. The housing is normally attached to a base plate and connected to a reference station by a twin tubing filled with water (or anti-freeze solution) and fitted with connectors. The reference station consists of a liquid-filled reservoir open to atmospheric pressure and located at a known elevation. The settlement or heave is measured relatively to the elevation of the reservoir.

The SSG is robust and stable. It can be installed in boreholes, standpipes, soil or concrete. The settlement gauge can also be attached to structures for monitoring settlement. To ensure maximum performance, the twin tubing should be flushed at regular intervals to remove air bubbles, and data should be compensated for temperature changes and changes in atmospheric pressure. For best results, de-aired water or antifreeze solution is recommended.

**Key Features**

- Wide range
- Easy to read
- Robust design for long-term monitoring applications
- Frequency signal of VW sensors easy to process and transmit over long distances
- Fiber optic transducer available that offers immunity to EMI/RFI/lightning and higher accuracy

**Applications**

- Measuring consolidation of foundation soils
- Measuring settlement of soil within an embankment
- Determining the effectiveness of soil improvement techniques such as wick drains, dynamic compaction and preloading
- Measuring settlement of tank bases
- Monitoring mine induced subsidence

</table>

---

1 With IRC-41 AV cable. Available for WV transducers only
2 Calibrated accuracy of the pressure transducer.

### Ordering information

Please specify:
- Range and transducer type
- Cable type and length
- Twin tubing length
- Fluid type: water or antifreeze solution
- If length of tubing exceeds 300 m, contact manufacturer for selecting adequate tubing size

### Optional Accessories

- Readout instruments: MB-3TL, SENSLOG
